# One Way Display Mode in OrderReshop

## Description

This gives the Seller/Customer more flexibility during the exchange process. This gives the ability to select a different fare family for each requested bound.

## Process

- In the OrderReshopRS, offers with different fare families for each bound can be selected, if available based on our filing.
- The process is controlled by configuration and can be different from AirShopping. For example, we can have Itinerary Mode (ITI) at Shopping and One Way Display (OWD) at Servicing.
